${ }^{1}$ Build orientation is on side long edge.
${ }^{2}$ Literature values unless otherwise noted.
${ }^{3}$ All Electrical Property values were generated from the average of test plaques built with the default part density (solid). Test plaques were $4.0 \times 4.0$ x 0.1 inches ( $102 \times 102 \times 2.5 \mathrm{~mm}$ ) and were built both in the flat and vertical orientation. The range of values is mostly the result of the difference in properties of test plaques built in the flat vs. vertical orientation.
